Parc Work Center, 8 route des bols
38 500 Voiron FRANCE

Contracting Owner

DOJO - Atelier d'architecture
Guillaume PRADELLE
L'Imaginarium
36 Quai de France
38 000 Grenoble France

Article 1: General terms and conditions of service

1.1 Service provision expected

Services include

The supply, delivery, transport, careful assembly and installation of furniture
The removal of all packaging, debris and other waste resulting from its operation, leaving the premises in perfect condition
Training in the operation and adjustment of all furniture (chairs, tables, etc.)

1.2 Delivery

The delivery method must be studied beforehand by both the successful tenderer and Guillaume Pradelle - DOJO Architects, and validated by the Project Owner or its representative.
Service provision includes the delivery of all furniture in the package, which will be installed in the company's offices, located on the first floor of the building.
A joint inventory of the delivery area (facades, stairs, terraces) will be carried out before and after each delivery. The repair of any damage will be the responsibility of the relevant tenderer.
Road authorisations for delivery (lorry, furniture lift, etc.) are the responsibility of the successful tenderer.

1.2 Assembly and installation

Installation will be carefully carried out in accordance with best practices, and with a minimum of disruption to the occupants.
Furniture installation will follow the rules on flatness, verticality and alignment, especially where several pieces of furniture are installed side by side.
The installer must ensure that the furniture is completely stable, even after it has been installed in accordance with the recommendations.
Any adjustments to hinged doors, sliding doors or any other mobile systems must allow for smooth, noiseless, squeak-free and trouble-free handling during the lifetime of the furniture.

1.2 Training

The successful tenderer will be responsible for training the company's staff in the operation and adjustment of all furniture included in the package.
The owner of package 01 Office Chairs will also include training on ergonomics in the workplace, including, as a minimum, the adjustment of desk heights and office chairs in all their dimensions, as well as the organisation of work surfaces (computer equipment, lighting etc.).

Article 2: Technical data

2.1 Technical specifications

All of the furniture and equipment will be of the highest quality, both in their components and in the various assembly parts, coatings, paints and accessories. As far as possible, they should be modular, easy to maintain, have rounded corners with no sharp edges or roughness, and offer every guarantee of strength, safety and durability.

2.2 Aesthetic value

The layout of the furniture ordered should provide a harmonious and functional layout of spaces, ensuring comfort and conviviality for the users and the public who will be received. In general, specific attention will be paid to the different materials, shapes and colours offered. The furniture must therefore fit perfectly into the premises, taking the environment into account.
With regard to fabrics, particular attention will be paid to the colours and materials available, which must be in accordance with the company's graphic charter (included in the appendix).
The final choice of colours will be made by the client with the successful tenderer(s) based on the samples provided.

2.3 Colours

For all packages with coloured finishes (textiles or other materials), tenderers will have to demonstrate that they have finishing materials that adhere to both the graphic charter and the essence of the layout.

2.4 Sustainable development

The High Quality Environmental standard approach, in which EnergyLab is involved, as well as the themes that are dealt with within the structure, necessarily imply a commitment on the part of candidates to sustainable development, the main challenges of which are linked to the current market:
Limit the environmental impact of the product from its manufacture to its end of life by seeking environmental certification: NF Environnement, European Eco-label, etc.;
Limit the impact of forest exploitation by requiring the origin of the wood, sustainable forest management labels: FSC label, PEFC label;
Control supplies to ensure that only wood from controlled and/or sustainably managed forests is used;
Fight against indoor air pollution by limiting the emission of volatile organic compounds: require class E1 according to standard EN 717, 2 for particle boards;
Limit the quantity of waste and the proportion of non-recycled or non-recovered waste by ensuring the longevity and guarantee of supplies, the use of recycled materials, the recyclability of supplies, the availability of parts for repairing damaged supplies, and the limitation or even removal of delivery packaging;
Favour local or European production in order to limit costly CO2 imports;
Reduce polluting actions.

Article 3: Composition of the packages

| Package 01 Office chairs | | | | | |
|---|--|-------|-----|------------------------------|---------------|
